

ClamDoor

Painting Instructions

Preparation:

The unit is coated with a mold release wax residue.

Sand the surface to be painted with 100 grit dry/wet sandpaper. The surface only has to be dulled. The objective is to get the wax residue off and dust up the surface, not to remove any existing gel coat.

DO NOT sand to excess. After sanding, wipe down surface with acetone or paint thinner. Remove all dirt and dust.

Tape over all hardware and trim that will not be painted.

Painting:

The ClamDoor can be painted by hand or by spray. *Rust-oleum* carries a line of *Outdoor Decor* colors and is the easiest to use. Two or three cans should cover the entire outside surface.

Place the door in a protected area to prevent dust and bugs from blowing onto the surface while painting. An automotive paint, acrylic or marine paint also may be used.

To reach a non-skid surface on the lid, use a painting roller with a medium or low nap.
